

Baron Winds Project

Case No. 15-F-0122

1001.38 Exhibit 38

Water Interconnection

EXHIBIT 38 WATER INTERCONNECTION

The proposed Facility is not expected to require water interconnection facilities. As a result, the requirements of this Exhibit are not applicable to the operation of the wind turbines. If a new operation and maintenance (O&M) building is constructed to support the Facility, it is anticipated that water supply needs will be satisfied through use of a water well, which would be drilled by a water well driller registered with the New York State Department of Environmental Conservation. The system will be constructed in accordance with the standards set forth in 10 NYCRR Part 75, Standards for Individual Onsite Water Supply Systems. If an existing building is used for O&M purposes, the Applicant will evaluate the adequacy of any existing water supply and drill a new water well, if necessary.
